

People count the most-that's why we're building our talented team.

Holdings are busy recruiting for growth and we're proud to announce the successful appointment of four members to our technical team! It's vital that we grow the technical support side of our business for both lighting controls and lighting solution sectors. Our latest technical recruits include Scott Fowler, Brodie Irvine, Frank Vlcek and Christoph Gassel.

As Technical Manager in the UK, Scott is building our Technical team so that we can offer the best industry support and knowledge on lighting control, specifically for Casambi projects.

He will also be offering support on lighting application and product development for the OEM side of the business.

Scott moves into the role following a successful tenure at Thorlux where he developed his technical skills in rectifying and commissioning luminaires and control systems. Using this valuable experience, Scott aims to develop a world class controls commissioning and support structure at Holdings.

Scott is supported by Brodie Irvine in the technical department. Brodie joins us following a 4 year apprenticeship to become a qualified Electrician. He is excited to be part of this growing team.

Frank is a qualified Electronics Technician, with many years' experience working with lighting controls systems in both commissioning and programming. He joins Scott's team as Lighting Controls Commissioning Engineer and Technical Support. Frank already has experience working with the Casambi system and he is already busy commissioning Holdings/Casambi projects.

Christoph Gassel joins our DACH team as Technical Support advisor. He joins us fresh out of technical college, having studied electronic and electrical engineering. Christoph has already displayed a keen interest in lighting. His college project involved the design of a system which could dim itself via a sensor -a keen lighting mind to join a team full of talent and lighting aptitude!
